WELCOME PACKET

Welcome, Your Roofing Company. Here is what Roof Command does for you.

Roof Command finds the homes in your service cities most likely to need a roof right now, and Wing Digital runs it for you. Your team talks to homeowners and books inspections. We do the data, the lists, the storm watching, the website work and the reporting.

What Wing does for you every week

1

Every morning: a fresh Daily 50

Fifty homes ranked by who most likely needs a roof today, built from storm reports, roof age, permits and street activity. Ready on your phone before your first coffee.

2

Every night: storm watch

We track hail and wind reports for your area overnight. The morning after a storm, you get an alert with the streets hit, how many homes, and a list ready to work.

3

Every week: calls, posts, follow-ups

If we agree Wing helps with calls, Maddox works the list with you. Jack publishes local posts on your website and keeps your Google profile active. We chase every open lead so none go cold.

4

Every week: a short report and a 15-minute call

Grant sends the numbers and walks through them with you: what was worked, what got booked, what is next.

A quick tour of Roof Command

Today and the Daily 50

Your home screen. The 50 best homes for today, each with the key facts (roof age, last storm, nearby re-roofs) and where each fact came from. Tap a home to call or text the owner. Owner names show as initials until you reach out.

Storms and the morning-after alert

A storm timeline for your service cities: hail size, wind, which streets were inside the path. After a storm, the owner gets a morning alert by text or email with the hit streets and a ready list. Past customers in the path come first.

Turnover Radar

Shows streets where neighbors are re-roofing right now, from city permit records. When several homes on a street replace their roofs, the neighbors often follow. Homes that were just re-roofed drop off the list.

The home record and the LiDAR roof estimate

Every home has one page: year built, permits, storm history, notes and every call or text. The roof size is measured from public LiDAR laser scans of the area, so you get squares and pitch before you drive out. It is an estimate, usually within about 10%. Measure before you quote.

Proof Page

A clean one-page summary a rep can send a homeowner: the storm that hit their street, what to look for, and how to book a free inspection with Your Roofing Company. It carries your name and number, not ours.

CRM

Every lead moves through simple stages: new, contacted, inspection booked, inspected, won or lost. Every call, text and note is logged on the home, so anyone on your team can pick up where someone else left off.

Past customers

Your past-customer list lives here. When a storm crosses a past customer's street, they are flagged first, and you approve a friendly check-in. Past customers are your warmest leads and the easiest yes.

SEO tab

How Your Roofing Company shows up on Google: rankings for your main searches in your cities, the posts and pages we published, and Google Business activity. So you can see the website work, not just hear about it.

How we report results

Weekly report from Grant: homes worked, conversations, inspections booked, inspections shown, jobs won, storms in your area, website and Google movement.

Weekly 15-minute call same day every week. What worked, what to change, what is coming.

Monthly shown-inspection report how many inspections actually happened. Shown means a homeowner was home and the roof was looked at.

Numbers you can check every figure in the report comes from the CRM. You can open any home and see the calls and notes behind it.

Your Wing team

Grant

Your main contact. Email, weekly report, scheduling.

Maddox

Calls. Works the Daily 50 phone list with your team.

Jack

System and SEO. Builds your data, storm alerts and website work.

Reply to any Wing email or text the number on your kickoff email.

CHECKLIST

What we need from Your Roofing Company

Twelve things, and why each one matters. Most take a few minutes. The quickest way to send them is the intake form; the past-customer list goes in the CSV template. Never send passwords by email or text: for website and Google access, add Wing as a user instead.

This week needed before launch Your account in your name, we guide you Before day 8 needed for the first Daily 50

- [ ] **1. Logo and brand colours** — This week
  Your logo goes on the Proof Page homeowners see, the app header and every report. Homeowners trust a name they recognize. A PNG or SVG file and your main colour (or just your website) is enough.

- [ ] **2. Service area: cities and counties** — This week
  We build your homes, storms and permits from county and city records. Cities you do not serve stay off the list so reps never waste a call. Today we have: your service cities. Add or remove any.

- [ ] **3. Average job size and prices** — Before day 8
  Your typical re-roof price, price per square and common extras. It lets the app rank homes by job value and show a rough range next to the LiDAR roof size. It is never shown to homeowners.

- [ ] **4. Licence or registration numbers** — This week
  Your state licence or registration number goes on every message where the law asks for it. Also your current insurance certificate, so a homeowner who asks gets it right away.

- [ ] **5. Google review link and Google Business access** — This week
  Your review link goes in every after-job text, so happy customers can leave a review in one tap. Add Wing as a Manager on your Google Business Profile so we can post updates, photos and storm notices that help you show up in the map results. We never change your hours, phone or name without asking.

- [ ] **6. Website access** — This week
  We add local pages and posts that help your website rank in your cities, and the "Was my house hit?" sign-up page homeowners use to ask for storm alerts. Add Wing as a user (editor or admin) or introduce us to your web person. Also add Wing as a user on Google Search Console if you have it.

- [ ] **7. Past-customer list** — Before day 8

  Past customers are your warmest leads. When a storm crosses their street, they come first. Use the CSV template: name, address, phone, email, job date, and whether they said it is OK to contact them. An export from your current software or a spreadsheet works too.

- [ ] **8. Owner phone and email for storm alerts** — This week

  The morning-after storm alert goes here, so the owner hears about a storm before the competition does. Add a second person if someone else runs the morning.

- [ ] **9. Team members who need a login** — This week

  Name, role, mobile and email for each rep, office person or manager. Each person gets their own login, so calls and notes show who did what and reports are fair.

- [ ] **10. Preferred texting and calling hours** — This week

  We suggest texting 9 am to 7 pm, Monday to Saturday. The legal window for calls is 8 am to 8 pm local time, max 3 calls per home per day (your state may be stricter). Tell us if you want it narrower (for example no Sundays). The app blocks sends outside your hours.

- [ ] **11. Texting number and phone lookup accounts** — Your account

  Texts go out from a local number registered in your company's name with the phone carriers (this approval can take one to three weeks, so we start it on day 1). Homeowner phone lookups and the do-not-call scrub also run on an account in your name, including your state do-not-call list (if your state has one) plus the national list. We walk you through each sign-up; we never sign up for you or hold your passwords. For the carrier form we need your legal business name, EIN and business address.

- [ ] **12. Consent and legal sign-offs** — This week

  You approve, in writing: the service agreement, the call script and text templates, the consent wording on the "Was my house hit?" page, and the ground rules in the FAQ. Nothing goes out in your name until you have signed off on the words.

What we will never ask for

- Your passwords, card numbers or bank details by email or text.
- Permission to text cold homeowners automatically. A person taps send on every cold message.
- Promises about insurance payouts or deductibles.

LAUNCH PLAN

From kickoff to your first results in 14 days

Who does what, day by day. Wing does the heavy lifting. Your part is mostly sending a few things in week 1 and showing up to two short calls.

Wing · Your Roofing Company

DAY 0 · KICKOFF CALL (30 MIN)

Wing

Walk through the app with your real area. Agree hours and who works the Daily 50. Send the intake form link and this packet.

your company

Join the call with whoever runs sales. Start the intake form.

DAY 1 TO 2 · PAPERWORK AND THE SLOW ITEM FIRST

Wing

Send the agreement. Guide the texting-number carrier registration (it takes the longest). Start building your homes, storms and permits from county records.

your company

Sign the agreement. Create the texting-number and phone-lookup accounts in your name with us on a short call. Send logo, service area and licence numbers.

DAY 3 TO 5 · ACCESS AND DATA

Wing

Finish your market data and check it. Set up storm alerts. Create logins for your team. Start website and Google Business work.

your company

Add Wing to Google Business and your website. Send team names for logins and your preferred texting hours.

DAY 6 TO 7 · WORDS AND LISTS

Wing

Import your past customers. Load do-not-call lists. Draft the call script, text templates and the "Was my house hit?" sign-up page for your approval.

your company

Send the past-customer CSV and your prices. Read and approve the script, templates and consent wording.

DAY 8 · FIRST DAILY 50

Wing

First scrubbed Daily 50 goes live. A 20-minute rep training using the rep quick-start. If agreed, Maddox starts calling.

your company

Reps log in on their phones and work the first list. Every call and text gets an outcome.

DAY 9 TO 11 · WORK IT AND TUNE IT

Wing

Watch outcomes and tune the ranking. Past-customer check-in goes out once you approve the message. First local posts go live on your site.

your company

Keep working the list daily. Run booked inspections. Measure every roof before you quote.

DAY 12 TO 13 · STORM DRILL

Wing

Run a practice storm response on the latest storm in your area: the alert, the hit-street list, a door-knock route and follow-ups.

your company

the owner checks the morning alert reaches the right phone. Decide who knocks doors after a real storm.

DAY 14 · FIRST RESULTS REVIEW (30 MIN)

Wing

First weekly report: homes worked, conversations, inspections booked and shown, SEO baseline. Set the weekly call day and the monthly report date.

your company

Tell us what felt useful and what got in the way. Pick changes for week 3.

> **What could slow us down:** the carrier approval for the texting number (calls still start on day 8 while it is pending), and website or Google access. Sending those in the first two days keeps everything on time.

KICKOFF CALL · 30 MINUTES

Kickoff call with Your Roofing Company

Run by Grant, with Jack sharing his screen for the app. Goal: the owner leaves knowing what happens in the next 14 days, and we leave with dates, owners and the first items on the checklist.

Time	What	Who
0 to 3	**Hellos and goal.** Who is on the call, who runs sales day to day. "By day 14 your team is working a Daily 50 and we review the first numbers together."	Grant
3 to 6	**How the next 14 days go.** Show the launch plan. Flag the texting-number carrier approval as the slow item that starts tomorrow.	Grant
6 to 15	**The app on their real area.** Today and a Daily 50 card, a home record with the LiDAR roof size, the latest storm on the Storms screen, Turnover Radar, a Proof Page, the SEO tab. Let them ask.	Jack
15 to 21	**Decisions.** Who works the Daily 50 (their reps, Wing calls, or both). Texting and calling hours. Who gets the morning storm alert. Who knocks doors after a storm.	Grant
21 to 25	**Ground rules in plain words.** A person taps send on every cold message. Opt-outs are honoured right away. Roof sizes are estimates within about 10%, measure before you quote. No insurance or deductible promises. Walk the FAQ.	Jack
25 to 30	**Next steps.** Send the intake form and the checklist. Book the 15-minute account setup call (texting number and phone lookups) for day 1 or 2. Book the day 14 review now.	Grant

Before the call

- Jack: market data for your service cities loaded, app opens on their area with a recent storm.
- Grant: this packet ready to send (links or PDFs), agreement draft ready.
- Pick one real home in their area to demo end to end.
- Check their Google Business, reviews and website so we can speak to them.

After the call (same day)

- Grant: recap email with decisions, dates and the intake link.
- Jack: update the roofer's ONBOARDING.md with every decision and date.
- Calendar: day 1 or 2 account call, day 8 rep training, day 14 review.
- Nothing is sent to homeowners until the script and templates are signed off.

Decisions to write down on the call

Who works the Daily 50	_____
Texting hours / calling hours	_____
Morning storm alert goes to	_____
Door knocking after storms	_____
Weekly call day and time	_____
Day 14 review date	_____

REP QUICK-START · DAY 1

Your first day on Roof Command

One page. Follow it top to bottom. You are calling for Your Roofing Company, and every conversation aims at one thing: a free roof inspection.

1. **Open Today.** Log in on your phone. Today shows your Daily 50: the homes most worth reaching today, best first. Work from the top.
2. **Read the card before you reach out.** Roof age, last storm, nearby re-roofs. Each fact shows where it came from. Pick one fact to open with ("a hailstorm crossed your street on the 14th").
3. **Tap to call or tap to text.** The app opens the call or a ready text with the owner's number filled in. You read it, you tap send. Nothing goes to a new homeowner without a person tapping send. Calls only 8 am to 8 pm local time, max 3 calls per home per day (your state may be stricter).
4. **Say who you are, first.** "Hi, this is [your name] with Your Roofing Company. I'm calling because [the storm / your neighbors' roofs]. We're offering free roof inspections on your street." Book the inspection. No prices, no contracts on the call.
5. **Log the outcome right away.** Tap one: no answer, left message, talked, not interested, booked, do not contact. Add a one-line note. It takes five seconds and it is how the list gets smarter tomorrow.
6. **Book the inspection.** Set the date and time on the home record and move it to Inspection booked. Tell the homeowner who is coming and when. If they want to see proof first, send the Proof Page from the home record.
7. **Measure before you quote.** The roof size on the home record is a LiDAR estimate, usually within about 10%. Great for planning. On site, measure and confirm before any number goes on paper.

Always

- Give your name and Your Roofing Company at the start.
- "Stop", "no" or "take me off": tap Do not contact. Done for good.
- Max 3 calls to a home in a day.
- Log every call and text.

Never

- Promise an insurance payout or say "your insurance will cover it".
- Offer to cover, waive or rebate a deductible.
- Say you handle or negotiate the claim for them.
- Quote an exact price from the app's roof size.

Stuck? Ask in your team chat or tell Grant. Full rules: FAQ and ground rules.

FAQ AND GROUND RULES

The rules, in plain words

These keep Your Roofing Company out of trouble and keep homeowners happy to hear from you. They apply to everyone: your team and Wing.

The six ground rules

- **A person taps send on every cold message.** No robo-texts or auto-emails to homeowners who have not asked to hear from you.
- **Only inside the hours.** Calls 8 am to 8 pm local time, max 3 calls per home per day (your state may be stricter). Texts 9 am to 7 pm, Monday to Saturday. The app blocks sends outside them.
- **Stop means stop.** Anyone who says stop, no, or take me off is marked Do not contact on the spot, for good, on every channel.
- **Roof sizes are estimates.** LiDAR measurements, usually within about 10%. Measure on site before you quote.
- **No insurance or deductible promises.** Never promise a payout, never offer to cover or waive a deductible, never say you handle the claim.
- **Your name on every message.** Every call and text says it is Your Roofing Company, with a real callback number.

Questions roofers ask

Do you send texts to homeowners for us automatically?

Only to people who asked for them: homeowners who signed up on your "Was my house hit?" page, and past customers who said it is OK to contact them. For everyone else, the app writes the text and a person on your team (or Wing, if agreed) reads it and taps send. That is the law for cold texts and it also gets better replies.

What are the texting and calling hours?

Calls: 8 am to 8 pm local time, max 3 calls per home per day (your state may be stricter). Texts: 9 am to 7 pm, Monday to Saturday, unless you ask for something narrower. We keep to these hours for everyone, past customers included.

What happens when someone says stop?

Reply STOP to a text, or say "do not call" on the phone, and the home is marked Do not contact right away. It stays off every list, for every rep, for good. We also scrub every list against your state do-not-call list (if your state has one) plus the national list before anyone calls.

How accurate are the roof sizes?

They come from public LiDAR laser scans of the ground and buildings. Most roofs land within about 10% of a hand measurement. Some homes have older scans or tree cover and show "needs work". Use it to plan the visit and rough the job size. Always measure before you put a number on paper.

Can we talk about insurance at all?

You can say a storm crossed their street and that a free inspection will show whether there is damage worth a claim. You cannot promise insurance will pay, quote what it will pay, offer to cover the deductible, or say you will handle the claim for them. That is set by state law. The homeowner always pays their own deductible.

Where do the homeowner phone numbers come from?

A phone lookup service on an account in your company's name. Numbers are checked against the do-not-call lists before they reach a rep. We never share your data with another roofer.

Why do owner names show as initials?

Privacy. Full names show once your team reaches out to that home, so a list never floats around with everyone's names on it.

Who owns the data?

Your past customers, notes, calls and booked jobs are yours.

What does Wing need from us each week?

Log outcomes on every call, run the booked inspections, and join a 15-minute call. That is it.

What counts as a shown inspection?

The homeowner was there (or gave access) and your team looked at the roof. Booked but cancelled does not count. Shown inspections are the main number in your monthly report.

Do you ever mail flyers or postcards?

No. Roof Command uses calls, texts a person sends, opt-in alerts, email to past customers, and your website and Google profile.

This page is a plain-words summary for your team, not legal advice. Your service agreement and your own attorney have the final word.

INTAKE FORM

Tell us about Your Roofing Company

Fill in what you can, then tap **Download** and email the file to Grant (or copy the summary into an email). This form does not send anything anywhere; it only builds a file on your device. Your answers are kept on this device as a draft until you clear them. Please do not type passwords here.
